

How to Connect VPN Client

Open VPN

1. There are 2 ways to open your VPN client.

a. In the bottom right hand corner of your menu bar there is a small globe, click on this icon once.

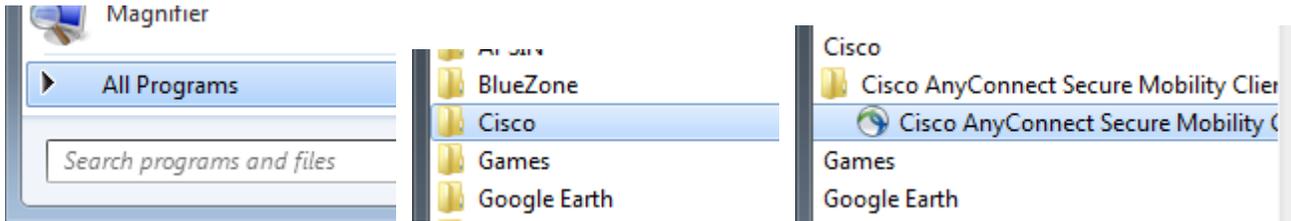

b. You can also open the VPN client by going through All Programs via the Start Menu.

i. Click on the Windows Icon in the bottom left hand side of the screen

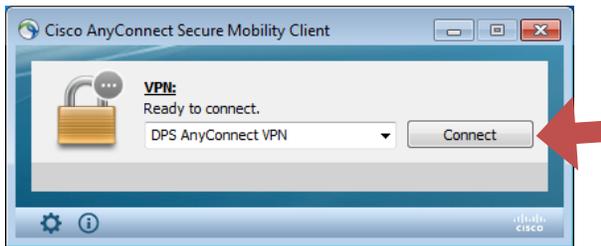

ii. Select All Programs → Cisco (folder) → Cisco AnyConnect Secure Mobility Client (folder) → Cisco AnyConnect Secure Mobility Client (program)

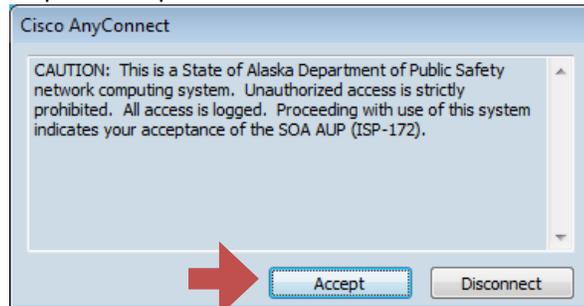

Log-In

2. The Cisco VPN Client will open. Click Connect.

Connect

3. You will see the Login box appear. This is the same as your DPS login, just like you would login to the laptop. If you entered this information correctly, you will see another box pop up asking you to accept the Caution Message, or disconnect the VPN client. Select Accept to complete the connection

4. The VPN client icon should now have a lock and a note will pop-up saying the VPN is connected – otherwise the connection failed.
