2017 Felony Level Sex Offenses

Program Overview

The Department of Public Safety (DPS) is tasked with collecting information on felony level sex offenses reported to state and local law enforcement agencies, as defined by Alaska Statute (AS) 12.63.100, and as required by AS 12.62.130. This is a required reporting program for state and local law enforcement agencies and is in addition to the requirements for Uniform Crime Reporting (UCR).

The Felony Sex Offense (FSO) database is a repository maintained by DPS for state and local law enforcement agencies to record reports of felony level sex offenses within their jurisdiction based on State of Alaska statutes. Data elements collected include victim and suspect demographics, victim/suspect relationships, offense location, weapon type used, and the associated statute violation.

Caution should be exercised in comparing data between Felony Sex Offense statistics, Uniform Crime Reporting, and the Alaska Victimization Survey; they are separate data collection efforts with different methodologies in aggregating incidents and victims.

The Uniform Crime Reporting (UCR) Program is a nationwide cooperative effort by federal, state, city, county and tribal law enforcement agencies to report data on crimes reported in their jurisdiction. The national program is managed and maintained by the Federal Bureau of Investigation (FBI). Since June of 1982, the Department of Public Safety (DPS) has administered the UCR Program for the State of Alaska. The current UCR program data collection methodology is focused on the number of times a person is victimized, while the FSO program focus is to collect information about an incident. For example, a person sexually assaulted multiple times by a single offender would likely result in multiple rape offenses reported to the UCR program, but the same situation would be reported in the FSO database as one incident with a single victim and multiple statute violations reported. Additionally, the FSO database has the ability to capture data elements for each reported sex offense not currently captured through the UCR program such as victim and suspect demographic information, victim and suspect relationship information, weapon type, and location of the assault. Noting this difference in data collection methodology, the most recent UCR figures reported in the 2017 Crime in Alaska publication show a 2.6 percent increase from 2016 data in the number of reported rape offenses.

In 2009, the Alaska Senate Judiciary Committee tasked the legislature to fund a victimization survey to determine the rate of both reported and unreported sexual assaults in Alaska. The Alaska Victimization Survey (AVS) is conducted by the University of Alaska Anchorage Justice Center, with oversight by the Council on Domestic Violence and Sexual Assault (CDVSA), a council within DPS. The survey is modeled after the national survey conducted by the Centers for Disease Control and Prevention. The AVS is comprised of a telephone survey of adult women aged 18 and over; the UCR program and the FSO database collect all offense and incident information reported to law enforcement. Noting this difference in data collection methodology, the most recent AVS results from 2015 show a decline in intimate partner and sexual violence since 2010.

It is important to note the incidents reported in the FSO database were documented at the initial reporting stage, likely prior to investigation by law enforcement. Agencies are instructed to report information when a felony level sex offense becomes known to law enforcement. The FSO database is not intended to track the life cycle of an incident—it is to provide insight into the volume and type of sex offenses being reported to law enforcement.

Additionally, some data elements of a reportable incident are optional; not all incidents include location, weapon, relationship, or victim/suspect demographics.

This is the third year that findings from this database have been published.

Quick Facts

> Reports of felony level sex offense incidents decreased 4% in 2017 compared to 2016; however, the number of victims increased 27%.

> Western Alaska reported the highest rate of felony level sex offense incidents; 106% higher than the statewide rate.

> South Central Alaska reported the lowest rate of felony level sex offense incident; 77% lower than the statewide rate.

> Victims under the age of 11 most often reported being assaulted by a parent or family member.

> Alaska Native females were reported to have the highest victimization rate of any gender or racial group, comprising 42% of all reported victims.

> The median age of female victims was 19, while the most common age was 15.

> The median age of male victims was 13, while the most common age was 4.

> In only 2.4% of incidents was the suspect a stranger to the victim. For victims under the age of 18, in only 0.3% of incidents was the suspect a stranger to the victim.

¹ Not all reported incidents included victim demographics, and some incidents included multiple victims and/or multiple suspects.
² In 2015, the Anchorage Police Department reported only the number of incidents with the corresponding statute violation and did not include victim, suspect, location, relationship, or weapon data.
Felony Sex Offenses by Geographic Area

Northern Alaska

Population (123,812) Includes:
- Denali Borough
- Fairbanks North Star Borough
- North Slope Borough

Incidents and Rates by Geographic Area

Rate of Felony Sex Offense Incidents Per 100K Population 2017

While agencies in the Anchorage area reported the highest volume of incidents (50% of the state total), agencies in Western Alaska reported the highest rate of incidents based on population, 106% higher than the statewide rate.

Both the Anchorage area and Western Alaska have reported incidents higher than the statewide rate.

7 Population demographics from U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates. Percentages of race for population does not equal 100.0% to account for multi-race individuals. The FSO guidelines advises reporting agencies to report a single race code per individual.
In **59%** of incidents, victims reported being assaulted by a member of their own race.

---

8 Not all reported incidents included suspect or victim demographics, and some incidents included multiple suspects or victims. Of the 1475 reported incidents, at least partial data for 1455 suspects and 1498 victims was provided. Racial relationships were counted when both victim(s) and suspect(s) within an incident had an identified race designation, even if the designation was “unknown.”
In incidents involving victims aged 0-10, victims most often reported being assaulted by a parent or other family member.

9 Not all reported incidents included relationship data; of the 1542 reported incidents, 743 relationships were provided between suspects and victims, when both the victim and suspect demographics were provided, and the relationship was identified as other than “unknown”.
Relationship of Victim to Suspect

Victims 11-17 Years Old

61% Victim was Known to Suspect: 139

39% Victim was Family Member of Suspect: 89

Victim was Acquaintance: 59
Victim was Friend: 35
Victim was Otherwise Known: 31
Victim was Boy/Girlfriend: 13
Victim was Child of Boy/Girlfriend: 1
Victim was other Family Member: 35
Victim was Child of Suspect: 20
Victim was Sibling: 15
Victim was Stepchild of Suspect: 8
Victim was Stepsibling: 7
Victim was Grandchild: 4
Stranger: 1

In incidents involving victims aged 11-17, victims most often reported being assaulted by an acquaintance.

10 Not all reported incidents included relationship data; of the 1542 reported incidents, 743 relationships were provided between suspects and victims, when both the victim and suspect demographics were provided, and the relationship was identified as other than “unknown”. 
In incidents involving victims aged 18 and up, victims most often reported being assaulted by an acquaintance.

11 Not all reported incidents included relationship data; of the 1542 reported incidents, 743 relationships were provided between suspects and victims, when both the victim and suspect demographics were provided, and the relationship was identified as other than “unknown”.

Victims 18+ Years Old

12 Not all reported incidents included location and/or weapon data. Of the 1475 reported incidents, 613 locations were provided and identified as other than “Other/Unknown; 642 incidents listed weapons other than “Unknown.” Location definitions can be found in the FBI’s National Incident Based Reporting System User Manual.
These are counts of potential statute violations reported; there is no direct relationship to victim counts, number of incidents/cases, or actual charges filed.

13% of the violations were for sexual abuse of a minor, with the following breakdown:
- Sex abuse of a minor in the 1st degree: 195
- Sex abuse of a minor in the 2nd degree: 383
- Sex abuse of a minor in the 3rd degree: 39

4% of the violations were for other violations, including:
- Online enticement of a minor: 24
- Incest: 16
- Indecent exposure in the first degree: 15
- Distribution of indecent material to minors: 14
- Kidnapping: 9
- Unlawful exploitation of a minor: 6

4% of the violations were for child pornography, with:
- Possession of child pornography: 63
- Distribution of child pornography: 11

1% of the violations were for sex trafficking/prostitution, with:
- Sex trafficking in the third degree: 6
- Prostitution (soliciting or purchasing): 6
- Sex trafficking in the first degree: 1

61% of the violations were for sexual assault, with the following breakdown:
- Sexual assault in the first degree: 758
- Sexual assault in the second degree: 410
- Sexual assault in the third degree: 79
