**Subject:** MSW DataMaster

The removed DataMaster from MSW is going to be at Palmer AST and is ready to be taken back to the crime lab. The replacement read interface detected during the first VOC but tested fine for the second. I also ran a test on myself and it proved to work fine with no additional status messages. This may be an RFI antenna problem, but I did not trouble shoot that, I am simply guessing... Thanks for getting the replacement to us so quickly.

As for the returning D/M, I can ask around the office for a delivery boy, or I can bring it in on Thursday while I am at HQ. If you need it prior to Thursday let me know, if I don't hear from you I will haul it in myself then.
