**Subject:** Question about the Crime Laboratory

Hello all,

Last night(on my night off) one of my officers was going to use the Datamaster DMT for a DUI arrest and the keyboard wasn't working. I checked it when I came in and I wasn't able to even to use the keyboard to type my password. I tried all the different USB ports on the back of the Datamaster DMT, but neither worked. I then tried using a different keyboard that was working perfectly on a different computer and it didn't work when I plugged it in to the Datamaster. Is there anything else I can do. I really want to get this working again ASAP. I work tomorrow then I'm off for a few days so I really wanted to get this up and running for my department before I go.

Thanks!

Sergeant Derek Beaver
